

Retris 2007

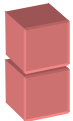

Here is a list of the pieces the Retris-bot will attempt to drop on you! Although it selects what piece to drop randomly, some pieces have higher odds of being dropped.

For example, the odds that "The Filler" will be dropped is 2 in 16. This means that on average you'll get "The Filler" 2 times for each 16 pieces dropped.

**"THE
FILLER"**
2:16

This is a great piece! It can be used to fill in anywhere. Remember that it can slide under already set pieces!

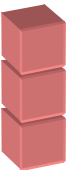

**"BIG
FILLER"**
3:16

The 2-block Big Filler is very useful for filling in long tubes, though it's sometimes a pain when you need a flat piece.

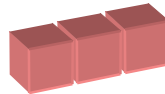

**"FLAT
FILLER"**
3:16

This is one of the pieces you'll see most. It can fill-in holes that get you the Clear-Display bonus. It can also slide under set pieces.

**"BIG
TUBE"**
1:16

The Big Tube is useful when you need to fill in a bunch of lines at once. Though it can be a killer near the top of the display!

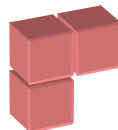

**"FLAT
DUDE"**
1:16

Flat Dudes are usually quite harmless, except when they force you to cover up lower holes!

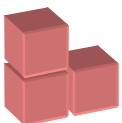

**"KILLER
LEFT"**
2:16

Unfortunately, you'll see a lot of these. On the bright-side, they can fill-in a single hole below. Much better than their cousins "Yikes" & "Bob".

**"KILLER
RIGHT"**
2:16

Just like its brother, this killer can mess up your plans. Remember though, that you can fill-in the hole by sliding a piece under this one.

"YIKES"
1:16

This piece will mess you up every time. It's just as bad as its brother piece over there →

"BOB"
1:16

Just like its brother "Yikes", this piece will mess you up every time. You always get it when you don't want it!
